In 2006, American Heritage magazine published historian James Gordon Steele's list of the top 100 most influential Americans in history. He listed Steve Jobs as number nine, evoking a heated debate with author, and former Democratic congressional candidate, Joshua Heitz--not because Steve Jobs did not merit listing, but because he was ranked higher than F.D.R, who was 14th on the list. Whether Jobs merits listing in the pantheon of the top 100 most influential Americans in history may be debatable, but his standing at the pinnacle of marketing and technology's Olympus is not.
